

WEB TECHNOLOGIES LAB

(Course Code: 23UPCSC1L07)

A programming laboratory record submitted to Periyar University, Salem

In partial fulfilment of the requirements for the degree of

MASTER OF COMPUTER APPLICATIONS

By

SURESH G

[Reg. No: U24PG507CAP026]

DEPARTMENT OF COMPUTER SCIENCE

PERIYAR UNIVERSITY

STATE UNIVERSITY - NAAC 'A++' GRADE - NIRF RANK 94

STATE PUBLIC UNIVERSITY RANK 40

SDG INSTITUTIONS RANK BAND: 11-50

SALEM - 636 011.

(OCTOBER-2025)

CERTIFICATE

This is to certify that the Programming Laboratory entitled
“ **WEB TECHNOLOGIES LAB (23UPCSC1L07)** ” is a
bonafide record work done by Mr. /Ms. _____
Register No: _____ as partial fulfillment of the
requirements for the degree of Master of Computer Applications, in the
Department of Computer Science, Periyar University, Salem, during the
Academic Year 2025-2026.

Staff In-charge

Head of the Department

Submitted for the practical examination held on.....

Internal Examiner

External Examiner

CONTENTS

S.NO	DATE	TITLE OF THE PROGRAM	PAGE NO	SIGNATURE
1.		Educational Details in a Tabular Format		
2.		Display CV on a Web Page		
3.		Design a Home Page having three links: About Us, Our Services, and Contact Us		
4.		Usage of Inline, Internal and External CSS		
5.		XML document and Style Sheet in CSS		
6.		Create Image Maps		
7.		Input Validation Using Angular JS		
8.		PHP to Fetch details from the database		
9.		Hide Paragraph using jQuery		
10.		JavaScript to handle mouse events and form events

Web Development Classified Into Two Sections

Frontend Development:

- **HTML (HyperText Markup Language):** HTML is the language used to create the basic structure and content of web pages. It uses elements, tags, and attributes to organize text, images, and links.
- **CSS (Cascading Style Sheets):** CSS is used to style the HTML content. It controls colors, fonts, layouts, and how the page looks on different devices. More importantly, CSS enables you to do this independent of the HTML that makes up each web page.
- **JS (JavaScript):** JavaScript adds life to web pages by making them interactive. It handles things like buttons, animations, and form checks.

Backend Development:

- **PHP:** PHP is a server-side scripting language designed specifically for web development. Since PHP code is executed on the server-side, so it is called a server-side scripting language.
- **Python:** Python is a programming language that lets you work quickly and integrate systems more efficiently.
- **Ruby:** An object-oriented programming language designed to be simple and natural to use. Ruby helps developers write clean and readable code.
- **Java:** Java is one of the most popular and widely used programming languages and platforms. It is highly scalable. Java components are easily available.
